

Spot the difference!

Consider all these extra benefits
of using **PE ultra**

- ▼ **Versatile performance**
Lower inventory costs
 - Works all seasons.
 - Fast and slow machines.
 - Bonds a wide range of substrates.
 - Proven to replace many other hot melts.
- ▼ **High stability**
Lower maintenance costs
 - No charring, cleaner machines.
 - Minimal downtime.
 - Reduced parts costs.
- ▼ **Cleaner running**
Lower downtime costs
 - Reduced stringing.
 - No dripping from nozzles - or blocking.
 - Reduced service time.
- ▼ **Better to work with**
Lower indirect costs
 - Excellent thermal stability.
 - No smell, no tainting.
 - Approved for direct food contact,

PE ultra

Clearly a very special adhesive

You'd be surprised at how many hot melt tanks we see that look like the one on the left. It is the result of a standard packaging hot melt being allowed to degrade - not only does it look (and smell) awful, but it will lead directly to nozzle blockages, production stoppages and increased costs.

Who wants that?

The tank on the right is filled with award winning* **PE ultra** hot melt adhesive. After over a year's continuous production, it remains clean, clear and odour free - and with no danger of nozzle blockages, **PE ultra** helps to reduce total costs.
